

Introduction

purpose

The purpose of **BatchHub** is to provide a centralized platform for university batches to manage academic resources, announcements, events, discussions, deadlines, and student collaboration in one organized place.

It aims to simplify batch communication, improve academic resource sharing, and support effective student collaboration. The SRS defines the system's **functional and non-functional requirements** and serves as a guide for its development and maintenance.

Intended Audience

The SRS is intended for:

- **Development Team** — To understand and implement the system requirements.
- **Project Supervisor** — To review the project scope and requirements.
- **Testers/QA Team** — To verify that the system meets the specified requirements.
- **System Administrators** — To understand system management and maintenance.
- **Batch Representatives & Stakeholders** — To understand the system's features and expected behavior.

Intended Use

BatchHub is intended to be used by university students and batch representatives to:

- **Access and share** academic resources.
- **Receive and manage** announcements, events, and deadlines.
- **Participate in** discussions, polls, and batch activities.
- **Find suitable** study or project teammates.
- **Track** academic activities, contributions, and important updates.
- **Manage the platform** through authorized administrator/CR functions.

product Scope

BatchHub will provide a centralized platform to:

- Manage students, roles, and batch information.
- Share academic resources and announcements.
- Manage events, schedules, and deadlines.
- Support discussions, polls, and student collaboration.
- Provide smart features such as team matching and academic insights.
- Allow administrators/CRs to manage batch activities.

Risk Definitions

The following risks are considered important for BatchHub and should be addressed during its development and operation:

- Data Security Risk — Unauthorized access to student or academic information.
- Data Loss Risk — Loss of important academic resources or user data.
- System Availability Risk — Service interruptions may prevent users from accessing the platform.
- Information Accuracy Risk — Incorrect announcements, resources, or deadlines may mislead students.
- Privacy Risk — Improper handling or exposure of students' personal information.

Description

User Classes and Characteristics

BatchHub will have different user classes, each with specific responsibilities and access levels:

- Students — Access resources, participate in discussions and polls, manage profiles, and collaborate with batchmates.
- Batch Representatives (CRs) — Manage announcements, events, polls, resources, and other batch activities.
- Administrators — Manage users, permissions, system content, and overall platform operations.

User Needs

BatchHub is designed to provide students and batch representatives with a simple, organized, and collaborative academic environment. The system addresses the following needs:

- **Centralized Information** — Access announcements, academic resources, schedules, and important updates from one platform.
- **Academic Collaboration** — Discuss academic topics and easily connect with batchmates for study and project work.
- **Resource Accessibility** — Quickly upload, search, organize, and access useful academic materials.
- **Better Academic Planning** — Track upcoming events, deadlines, and workload through reminders and schedules.
- **Batch Engagement** — Participate in polls, discussions, events, and other batch activities.
- **Smart Assistance** — Receive relevant teammate suggestions and personalized academic insights based on individual activities and needs.

Operating Environment

BatchHub will operate as a **web-based application** accessible through a standard internet connection. The expected operating environment includes:

- **Client Devices** — Desktop computers, laptops, tablets, and smartphones.
- **Web Browsers** — Modern browsers such as Google Chrome, Microsoft Edge, and Mozilla Firefox.
- **Internet** — A stable internet connection for accessing platform features and online services.
- **Server Environment** — A web server and database server for hosting the application and managing data.
- **Deployment Environment** — The system will be designed for online deployment rather than being limited to a local development environment.

Constraints

The development and operation of BatchHub will be subject to the following constraints:

- **Internet Dependency** — Online features require a stable internet connection.
- **Access Control** — Features will be restricted according to user roles and permissions.
- **Security Requirements** — Student information and academic resources must be protected from unauthorized access.
- **Resource Limitations** — System performance may depend on available server, database, and network resources.
- **Development Limitations** — The project must be completed within the available time, technology, and development resources.

Assumptions

The development of BatchHub is based on the following assumptions:

- **User Access** — Users will have access to a compatible device and a stable internet connection.
- **Accurate Information** — Students, CRs, and administrators will provide correct and up-to-date information.
- **Responsible Usage** — Users will follow the platform's rules and use their accounts appropriately.
- **Content Management** — CRs and administrators will maintain accurate announcements, resources, events, and deadlines.
- **System Resources** — The deployed system will have sufficient server and database resources to support the expected number of users.
