

Assignment
LAB 4

Course title: Software Engineering Laboratory
Course code: CSE-3206
Session: july-december 2026

Date of Submission:08/10/2026

Submitted to-

Tanjim Taharat Aurpa

Assist Professor

*Department of Data Science and Engineering,
University of Frontier Technology, Bangladesh*

Rumana Yasmin

Lecturer

*Department of Computer Science and Engineering
Bangladesh University of Professionals
Mirpur Cantonment, Dhaka-1216*

Test Case 1: Notification Management

Test Scenario: Notification Targeting

Field	Details
Test Case ID	TC-BH-NOTM-01
Test Scenario	Verify that the system delivers notifications only to users or groups relevant to the corresponding academic event (Requirement FR-43).
Preconditions	1. The notification system is active. 2. A specific target group is defined for the notification. 3. Target and non-target student accounts are available.
Test Steps	1. Create an academic notification for a specific target group. 2. Log in as a student belonging to the target group. 3. Check the notification section. 4. Log in as a student outside the target group. 5. Check the notification section.
Input Data	- Target Group: Batch 24 Students - Notification: New Course Material Available
Expected Result	The system delivers the notification to students belonging to the target group and does not deliver it to students outside the target group.
Actual Result	<i>(To be completed during test execution)</i>
Status	<i>(Pass / Fail) (To be completed during test execution)</i>
Remarks	Validates notification targeting to ensure that academic notifications are delivered only to relevant users or groups.

Test Case 2: Project Collaboration Management

Test Scenario: Group Joining

Field	Details
Test Case ID	TC-BH-PROJ-01
Test Scenario	Verify that a student can join an available project group according to the group's membership rules (Requirement FR-31).
Preconditions	1. Student account is active and logged into BatchHub. 2. An available project group exists. 3. The student satisfies the group's defined membership rules.
Test Steps	1. Navigate to Project/Group section. 2. Select a group that is one member below its maximum limit. 3. Click Join Group and confirm. 4. Verify the student is added and the group reaches its limit. 5. Attempt to join the full group with another student. 6. Verify that joining is rejected because the group is full.
Input Data	- Project Group: AI Research Group - Student: Eligible student - Group Status: Available
Expected Result	The system successfully adds the student to the selected project group and displays the updated group membership.
Actual Result	<i>(To be completed during test execution)</i>
Status	<i>(Pass / Fail) (To be completed during test execution)</i>
Remarks	Validates that eligible students can join available project groups according to the defined membership rules.

Test Case 3: Academic Resource Management

Test Scenario: Permission-Based Resource Access

Field	Details
Test Case ID	TC-BH-RES-01
Test Scenario	Verify that a student cannot access course materials from a course they are not authorized to access (Requirements FR-24 and FR-25).
Preconditions	1. Student account is active and logged into BatchHub. 2. A course material exists for a course the student is not authorized to access. 3. The material is available in the system.
Test Steps	1. Navigate to the Course Materials section. 2. Search for or attempt to access the restricted course material. 3. Select the material. 4. Attempt to view or download the material.
Input Data	- Course: CSE-4001 - Material: Lecture Notes.pdf - Student: Student not authorized for CSE-4001
Expected Result	The system denies access to the course material and prevents the student from viewing or downloading it.
Actual Result	<i>(To be completed during test execution)</i>
Status	<i>(Pass / Fail) (To be completed during test execution)</i>
Remarks	Validates permission-based access to academic resources and prevents unauthorized students from accessing course materials.
